

Stop wasting your time on manual reports.

Many companies want to be data-driven, but don't know how to do it effectively. Others know how to use their data, but it costs several tedious hours of compiling manual reports with numbers from 18+ software applications every single month.

In either case, reporting is messy and too time-consuming to drive the growth you want to achieve.

Why do BI initiatives fail?

Don't know what to track

Figuring out which metrics will help you grow is as important as how you track them.

Too expensive/limiting

Traditional BI solutions typically offer DIY reporting with minimal functionality ... or cost upwards of \$50k.

Time consuming

Manually collecting information from 18+ cloud applications leads to major Alt+Tab fatigue.

Grow has a library of over 300 pre-built metrics, plus professional onboarding and support from data analysts to help in your journey to growth.

Even the right data gets weaker over time,
which limits your ability to make quick decisions.

* Gartner results of failed BI projects
* The Data Warehousing Institute research of the inability to communicate accurate information.

Use a data dashboard to meet your goals.

Companies that use data analytics are 5x more likely to make faster decisions than the competition.*

Every dollar spent on BI returns \$13.01.**
