

Hirebridge - ADP Workforce Now Integration

Hirebridge is now integrated with ADP Workforce Now, and makes it easy to send new hire information directly from Hirebridge into ADP Workforce Now.

Existing customers of Hirebridge Recruiter and ADP Workforce Now (Version 8.0 or later) can leverage the integration.

Getting Started

Hirebridge Recruiter customers will need to work directly with their Hirebridge representative to purchase and schedule the implementation and integration.

ADP Workforce Now customers will need to purchase the Hirebridge Connector from the ADP Marketplace in order to obtain the required ADP API keys, which are required in order to begin the integration

Once the ADP API keys are purchased, ADP will contact the customer in order to authorize the release of the API keys to Hirebridge.

Fees & Costs

There is a one time implementation and setup fee paid to Hirebridge to get the integration in place.

There is a monthly fee associated with the service which is paid to ADP through the ADP Marketplace site. Connection fees are based on company size, so please check the ADP Marketplace to see the monthly fee.

How Does The Implementation Work

After completed, when a candidate within the Hirebridge Recruiter environment is moved into the HIRE workflow step, a call is made to ADP's API. The new hire information is automatically transferred from Hirebridge into the ADP Workforce Now new hire wizard, where additional processing occurs and the new hire is saved as an new employee in the ADP Workforce Now system.
