

Summary

TextRecruit is the industry's most advanced candidate and employee engagement platform, providing a complete set of services including text messaging, live chat and artificial intelligence to help hire better people, faster.

Key Benefits

TextRecruit simplifies the path from sourcing to hire by automating tasks, building candidate pipeline, optimizing candidate engagement and enabling a mobile workforce.

Automate Tasks

Reduce cost and time to hire by automating repetitive tasks and increasing recruitment efficiency.

Build Candidate Pipeline

Extend reach to new and existing talent pools at scale with high-volume text and automated screening and candidate profile creation.

Optimize Candidate Engagement

Convert more applicants with increased engagement, while screening for requirements, scheduling interviews and communicating next steps automatically.

Enable a Mobile Workforce

Improve onboarding and collaboration between decentralized teams; while simplifying its management and tracking from a single platform that integrates with your existing HR systems.

What is TextRecruit?

TextRecruit is enterprise-grade candidate and employee engagement software that integrates with HR and Application Tracking Systems (ATS) to help scale engagement and enable centralized management of candidate and employee communications from one platform.

Designed for HR and talent acquisition, its capabilities offer a consistent recruitment to onboarding workflow, allowing recruiters and HR to manage relationships throughout the entire employee lifecycle.

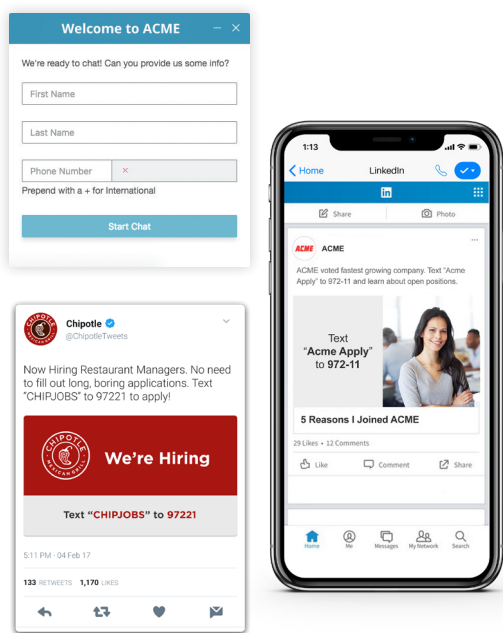

Optimize at every stage of the employee lifecycle

Metrics shown represent TextRecruit customer averages.

Integration Partners

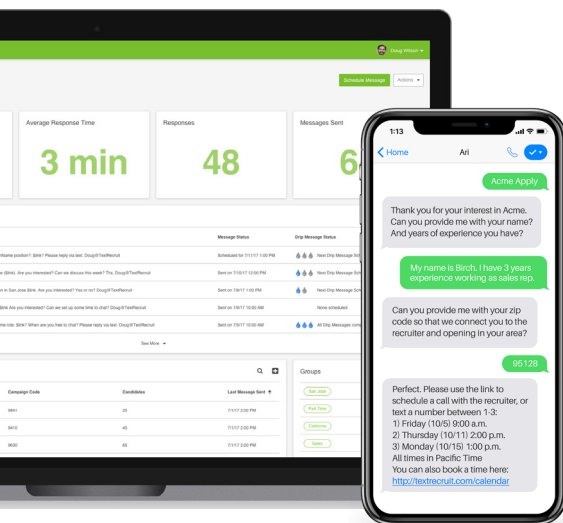

Attract & Apply

Attract candidates with a branded and layered approach that includes adding text and chat to career and social media sites, text campaigns and short codes used in physical outlets and at events; making it easy for candidates to apply via text.

TextApply: Text and AI automation-enabled service that leverages keywords (i.e. "Recruit") or short codes (i.e. 97211) to capture applicant information, automate responses and fill talent pipeline from anywhere 24/7.

JobChat: Live or automated agent online chat solution to nurture immediate interest and instantly engage candidates from career or social sites. Collect information, answer questions and re-target with text if potential candidates leave the site without applying.

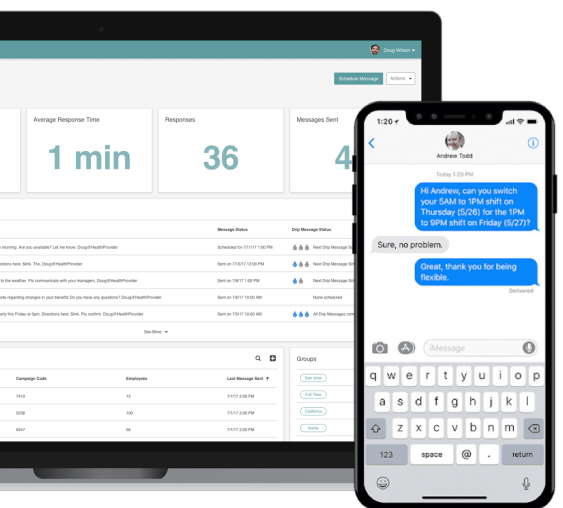

TextRecruit: Two-way texting, content, audience and campaign management and analytics solution to search and send personalized individual or bulk text messages to candidates. GDPR/TCPA/CAN-SPAM compliant, no apps to download with an average 37% response in 12 minutes.

Engage & Qualify

Combine modern artificial intelligence with live text to reach and keep more candidates engaged and ready for hire. Additionally leverage real-time analytics to measure response and candidate satisfaction.

Artificial Recruiting Interface (ARI): Customizable AI chatbot to automate repetitive, high-volume tasks and intelligently engage candidates across the hiring funnel. Use it to qualify candidates, create candidate profiles and schedule interviews; helping to convert candidates to employees at scale.

Hire & Collaborate

Continue to communicate and foster real collaboration during on-boarding and throughout the employee lifecycle.

TextHR: Centralized, integrated employee communication platform to reach all employees helping to ensure company performance from on-boarding to emergency preparedness, while measuring reach, response and communication effectiveness.

TextReach: Centralized collaboration for decentralized workforces. Bring your team together and reach them in real-time using SMS. Increase productivity and easily stay on top of moving people, parts, and projects.
