

Support during the Covid-19 Pandemic

The past few weeks have shown us, even in times of uncertainty, our healthcare providers remain strong and resourceful, all while continuing to find creative ways to maintain continuity of care.

With many providers facing critical staffing challenges both in healthcare facilities and delivering home health services, we would like to make FieldCentric's functionality available to healthcare providers free of charge* during the Covid-19 Pandemic.

We know that scheduling already scarce resources, handling call-offs, communicating with field based workers and getting real time insight into what's happening on the ground is a challenge in the best of times.

As we face this unprecedented crisis together, the team at FieldCentric stand by to help in any way we can to allow your team to focus on providing frontline care to those in need.

FieldCentric

*Conditions apply - Scope to be determined during consultation.

Core Functionality

FieldCentric has a wide range of functionality that can streamline many aspects of providing health services, outlined below is some of our core functionality that can be implemented quickly and with little impact on existing services.

Communications & Collaboration

FieldCentric's social communications platform enables you to streamline secure communications in the field away from SMS/Email/Social Apps, quickly rollout BYOD policies and adhere to working time directives.

Routing & Scheduling

FieldCentric's routing and scheduling tool can optimize visits and routes to reduce drive time, accommodate call-offs and prioritise care. Although typically integrated with HCM & EMR applications to get a full picture of available labor and visits, FieldCentric is able to accommodate manual uploads to avoid immediate integrations.

Configurable Forms & Workflows

FieldCentric's digital forms allow you to capture crucial data and evidence from the field. Quick to setup and deploy, forms can be customised for many routines and processes and include photo and signature evidence.

Work Finder

Our work finder module allows users to search for and assign to themselves additional work or visits when they become available. Push notifications alert users to when new work is available.
