

## The Aquera IT Sync Bridge For ADP®

### HR-Driven IT Provisioning Made Simple

The Aquera IT Sync Bridge for ADP enables HR-driven IT provisioning for your organization by automating the end-to-end synchronization and provisioning of users between HR to IT. The bridge enables ADP as the system of truth to power IT provisioning for the organization by driving changes in real-time across downstream applications as users are onboarded, off-boarded or updated.

## Unlock The Benefits of HR-Driven IT Provisioning

### + Enable Day One Productivity

The IT Sync Bridge automatically synchronizes user information from ADP and initiates IT onboarding on a predetermined date before the employee starts. By automating the IT onboarding process, employees are given immediate access to applications necessary to do their jobs on day one.

### ✓ Mitigate Security Gaps

When an employee leaves a company, their accounts in all connected apps are deprovisioned and access is immediately revoked. This eliminates security gaps arising from delayed removals and human error.

### 📡 Sync Employee Data in Real-Time

Whenever an employee's information within ADP is updated, it will automatically sync to all connected applications.

### ✓ Take Advantage of Simple Deployment

The IT Sync Bridge for ADP is a turnkey, no-code solution making deployment simple and fast with safe roll-out features. The bridge provisions and deprovisions users to both on-premises and cloud business applications, currently supporting 400+ applications.

## Works with Identity Providers, Directories and Applications

The IT Sync Bridge integrates with all the major identity and directory providers including Active Directory, Azure AD / Microsoft 365, CyberArk, Google Workspace, Okta, Ping Identity, and others.

### About Aquera

Each year, Aquera automates tens of millions of joiner, mover, leaver transactions for millions of workers across the world with the Aquera HR Integration as a Service Platform. Worker onboarding to IT from HR applications is automated in real-time into critical business applications and corporate directories like Active Directory, Azure AD and Okta. Aquera has pre-built integrations to over 40 HR applications and over 800 business applications. As employees join, move positions within, or leave an organization, supporting changes made within the HRIS are automatically propagated across the IT and application infrastructure, adding and maintaining application access for only those users who should have access and removing access and retiring licenses for those who should not. The benefits include day one productivity for new hires, closure of security holes with exiting workers, and lower overall operational costs.
