

Aquera Identity Directory Sync Bridge

Frequently Asked Questions

What are the key benefits of the Aquera Identity Directory Sync Bridge?

Aquera's top benefits include:

- HR-driven IT automation for optimal security and operational speed.
- Day zero productivity gains for new workers with immediate access to business applications.
- Eliminating security holes from departing workers with continued access to critical applications.
- Real-time synchronization for large worker populations and tighter security.
- No deployment or maintenance risk for the customer.
- No coding or Aquera-specific skills are required.
- Rapid time to value accelerating the ROI of your ADP Workforce Now® or ADP Vantage HCM® platform and IDP or directory investments.

What are Aquera's key features?

Aquera's top features include:

- Out-of-the-box, rapid configuration in minutes.
- Scheduled synchronization of your ADP® platform with your IDP or directory.
- Delta synchronization loads only the ADP records that have changed (for the push model).
- Synchronization with any ADP Workforce Now® or ADP Vantage HCM® attribute.
- Multiple joiner and leaver stages available to your IDP for provisioning and deprovisioning of downstream applications.
- Write-backs to ADP for selected fields such as email addresses.
- Consistent customer experience with the bridge as with any native connector from your IDP or directory.

Our customers are asking for single sign-on (SSO). Does Aquera provide SSO?

No, Aquera does not participate in the SSO authentication flow. Aquera participates in the synchronization of ADP® data with directories and identity platforms and in the identity lifecycle management (create, update, delete) of user accounts in other applications.

How do you connect with on-premise systems like Active Directory?

We provide you with two options:

- **Direct connection:** Aquera will route all TCP/IP traffic from a specific IP address. You can configure the firewall in your datacenter to allow for this inbound traffic to come from this specific host. It can also restrict the connection to be only to the IP address/port where the application will receive the traffic from Aquera.
- **Agent proxy:** Aquera provides a secure HTTP tunnel between on-premise based applications and the Aquera cloud. No firewall adjustments are required provided that outbound communication to proxy.aquera.io is allowed directly or through an HTTP proxy.

What is the deployment process?

Once you purchase the connector on ADP Marketplace and authorize Aquera to access your ADP instance by following the authorization flow within the marketplace, we'll set up a 30-minute deployment call to test the connection and get data flowing in a simulation mode. At that point, you can review your data, clean it if needed, set up any mappings and data transformations, and deploy the solution to production.

Do I need a test instance?

No, we provide a simulation-only mode so you can see what updates would have been made without affecting production accounts.

About Aquera

Aquera is an identity integration platform as a service that closes the connectivity gaps for real-time identity governance and lifecycle management workflows. The platform offers SCIM gateway services for account provisioning and aggregation, orchestration services for user and password synchronization, and workflow services for the governance of disconnected applications. Out-of-the-box and built on-demand connectivity is plug-and-play from any identity management platform or HR application to any cloud or on-premises application, database, directory, device or B2B portal. The identity integrations require zero coding and rapidly deploy in minutes.
