

20+Mbps 2-WAY DATA CONNECTIVITY ANYWHERE EVEN IN AIRCRAFT

INDUSTRIAL IoT DATA THAT GOES THE DISTANCE

SqwaQ delivers reliable connectivity for mobile, Industrial IoT applications that empowers new capabilities while saving your operation time and money.

About Us

THE SQWAQBOX

Our patented modem aggregates up to post twelve 4G LTE SIMM cards into one fat data pipe to deliver massive throughput. Multiple inputs can be scramble encrypted, prioritized and transmitted across multiple cellular networks simultaneously to maximize throughput and performance. Change networks or configuration at will.

NATIONWIDE COVERAGE

A single LTE connection isn't fast enough or reliable for high bandwidth needs. SqwaQ can provision services across one or many different networks, to deliver the best coverage for your needs. We're building the MVNO service on which a variety of B2B and M2M customers can leverage high throughput and speed for bandwidth intensive IoT.

EXPERIENCED TEAM

Our team had decades of telecommunication experience. We've all "been there and done that" before. Call us to discuss your custom projects or unique integration plans.

What is Prioritized Bonded 4G-LTE? PB4G™

SqwaQ has more than a dozen patents issued and pending on our PB4G™ technology. Our powerful solution aggregates multiple cellular connections, then prioritizes, encrypts, and scrambles your data transmission according to your needs and preferences. This provides a workhorse for massive throughput with the flexibility to prioritize data transmission according to importance. SqwaQ liberates mobile industrial IoT users whether you are on the move, in a rural environment or in an aircraft at 5,000ft.

SqwaQ for Fixed/Mobile/Aerial Bandwidth

SqwaQ is providing MVNO (Mobile Virtual Network Operator) service offerings across diverse cellular networks for Fixed/Mobile/Aerial high bandwidth needs of n x 4G LTE. Our market Verticals include: Oil & Gas, Aviation, Drones, Utility, Pipeline, Security, GIS, Construction, Smart Agriculture, Public Safety & Emergency Response, DOD, DHS, and Telemedicine.

Mobile, Industrial IoT applications require robust connectivity in rural, isolated and often times extremely remote or hostile environments. In today's world connectivity drives productivity and this is where SqwaQ excels. Our ability to provision custom connectivity solutions almost anywhere will liberate your remote and mobile IoT operations with connectivity that will improve your bottom line.

VERTICAL MARKETS/CAPABILITIES

OIL & GAS

Upstream, midstream, downstream. We provide lower cost inspections and real time decision making with more bandwidth in remote areas.

ENERGY & UTILITIES

Perform lower cost inspections via drones, with unlimited range BVLOS flights and real time, nationwide video transmission.

AMBULANCE & TELEMEDICINE

Broadcast VoIP, video and medical sensor data from remote scenes to the hospital for live sessions with doctors.

CONSTRUCTION SITES

Monitor security and progress in real time with multi-camera, remote video streaming plus onsite Wi-Fi for workers.

AVIATION & DRONES

Connect drones, helicopters and light fixed-wing aircraft with 2-way broadband that can stream multiple cameras nationwide.

REMOTE SECURITY

Stream motion activated video and triggered events from remote locations to monitor and respond from one central office.

SMART AGRICULTURE

Improve farming and smart ag applications with robust IoT for connectivity, automation and remote monitoring.

GOVERNMENT DOD & DHS

Remote bandwidth cheaper than satellite that supports video with scramble encryption and AI. Private backhaul available.

600+ Global Cell Networks
