Productivity Better Be Top Of Mind In A Post-Pandemic Hybrid Work World

Productivity is soaring amid the pandemic, but there are warning signs ahead for a post-pandemic world. The vision of Prodoscree—a productivity intelligence company—is to be at the center of digital transformation, providing exceptional productivity intelligence.

FAST COMPANY

How COVID-19 has us doing more in less time

Prodoscore also pinpointed when its users are getting more done, with the window of greatest productivity from 10 a.m. to 1 p.m. Tuesday is the most productive day of the week, followed by Wednesday and Thursday."

A Paradigm Shift: The Structure of the Remote Workplace Revolution

"They found that in the period between January 2020 and January 2021, employees were 200 percent more productive and worked longer days post- than pre-pandemic."

Rejecting hybrid work will cost employers, survey finds

Employees at risk of attrition cut back on their time at work five to seven weeks before leaving, according to the Prodoscree Research Council. One metric is called "gap time," which is time that is unaccounted for and might be a sign of declining productivity, said Adrian Reece, the Prodoscree Research Council's principal statistical consultant. As employees near the end, this gap time increases.

Nights and weekends: Remote work may mean longer hours, lost liberty

Understanding how employees spend their day, when they are the most productive and with which tools, can help employers create a work environment that benefits everyone.

THE WALL STREET JOURNAL

Bosses Still Aren't Sure Remote Workers Have 'Hustle'

As homebound employees juggled caregiving, online schooling and other issues alongside their regular workloads in the past year, many companies reported that their workforces were productive and engaged. Using an array of metrics for 7,000 workers, such as use of email and other cloud-based tools, productivity software company Prodoscree Inc., for instance, found employees were overall more productive and worked longer hours in 2020 than in 2019.

Today's Redefined Workspaces: 5 Companies Allowing Employees to Work From Home

In fact, according to Prodoscree, people were 47% more productive working from home than they were working in an office. Even now that a COVID vaccine is available and there seems to be a light at the end of the pandemic tunnel, more businesses are determining what their new normal will be.

Inc.

Is the Office Dead Forever?

Research prior to the pandemic demonstrates the positive impact working from home has on an employee's job satisfaction; research during the pandemic has shown people are more productive at home than they were in the office.

- Adrian Reece, principal statistical consultant and member of the Prodoscree Research Council

Calls, messaging, video chats now take up this much of your workday

Such communication activities now take up 80% of the typical employee's time at work. But that's not necessarily a bad thing, at least in terms of how much work employees are getting done. Instead, it's largely a function of how the coronavirus crisis has changed work for many office professionals.

Rewarding Employees Who Leave Remote Work Behind

Using an array of metrics for 7,000 workers, such as use of e-mail and other cloud-based tools...Prodoscree found employees were overall more productive and worked longer hours in 2020 than in 2019.

Employees Spent 24 Days in Meetings in 2020

"The research is important to small businesses as it confirms productivity trends emerging from remote working environments. With employees spending an average 24 days in meetings in 2020, the report dispels any lingering fears that a remote workforce equates to diminished productivity.

Study Shows Employee Work Hours Dip 5-7 Weeks Before Quitting: Prodoscree Report

The study showed that for a person likely to quit, the overall duration of work started falling about 5-7 weeks before leaving. The work hours dipped more closer to their departure. Further, there was a 51% decline in email activity for a person inclined to leave. This behavior change occurred about 35-49 days before they left the company.

DIGITAL JOURNAL

Defining the productivity threshold in the age of COVID-19

A new report finds that low-productivity workers contribute only 90 minutes – or around 20 percent – of an eight-hour day. This means a low-productivity worker is wasting \$48,000 of a \$60,000 annual salary, meaning least productive employees are earning more per hour than the most productive employees.
