Star2Star SD-WAN
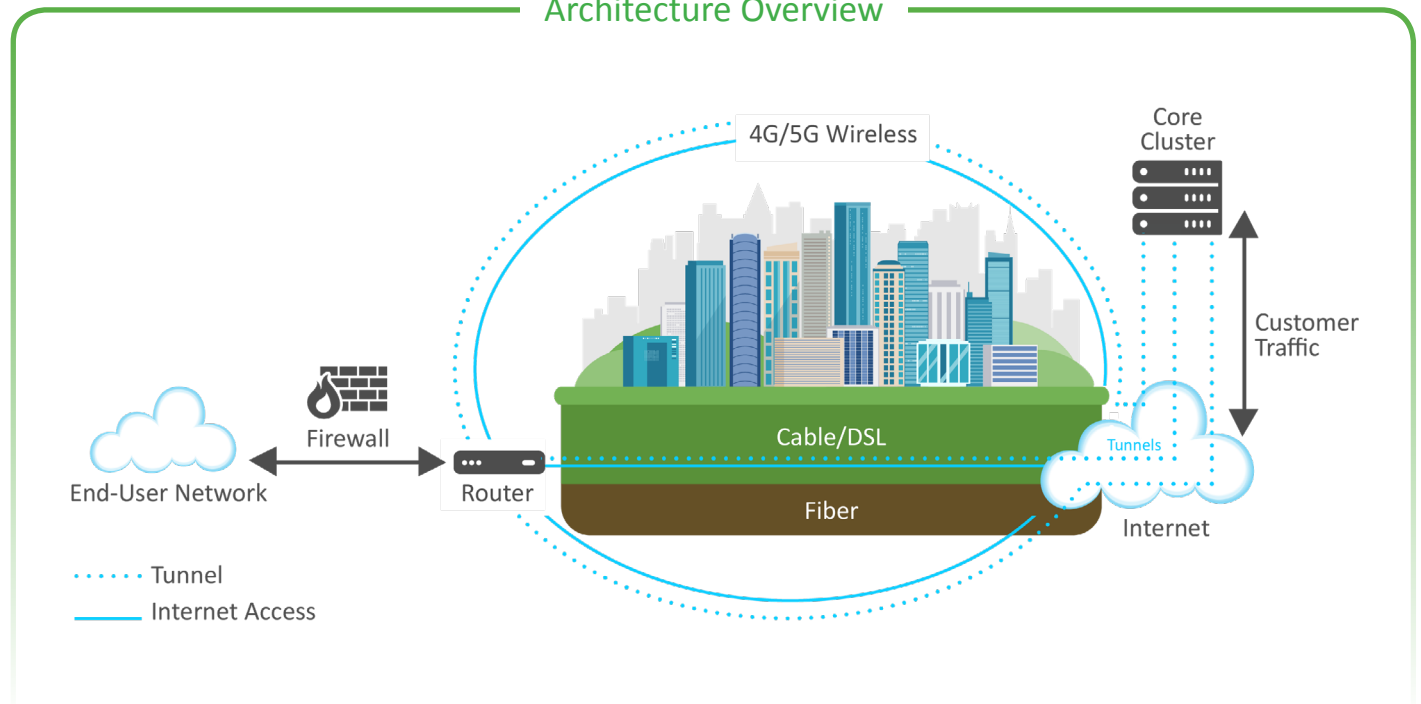

powered by **bigleaf** networks

Prioritize Your Communications From Voice To Data

The power to optimize your network speed, quality, and reliability is built-in with Star2Star's Full Spectrum Communications Solution. Unify your communications with technology that adapts to the way you do business.

The Power Of SD-WAN

Star2Star's Full Spectrum Communications Solution provides Software-Defined Wide Area Networking (SD-WAN) functionality that enhances your communications experience. With the power of SD-WAN, you can improve your network performance with customized traffic routing, network visibility, user-level controls, and more.

The Benefits of SD-WAN

Cloud, Voice, & Data Optimization
Our SD-WAN solution features cloud, voice, and data optimization which makes your cloud-based applications, voice services, and data needs top priorities for your network usage. Experience the fastest and most reliable connection for your mission-critical applications and communications.

Customized Network Usage
By leveraging Intelligent Load Balancing, our SD-WAN solution automatically identifies your application usage patterns and their performance needs. The load balancing algorithm combines this with real-time bandwidth and connectivity data to customize your network usage for your business' exact needs.

Quality-of-Service (QoS) On Any Network
Get the best quality connection with a system that prioritizes VoIP and real-time traffic needs across any internet connection including broadband, cable, and Wireless. The built-in QoS features are bi-directional for enhanced functionality and dynamically adapt to varying bandwidths and traffic demands.

Uninterrupted Service
You can rely on consistent, uninterrupted service with our intelligent failover features. Our SD-WAN solution seamlessly maintains application sessions and connections even when one or more of the physical network connections experiences outages, packet loss, latency, jitter, or congestion.

Direct Peering With 150+ Cloud Apps
Optimal user experiences are emphasized with direct interconnections to hundreds of your favorite cloud applications including Amazon Web Services, Google, Apple, Microsoft Windows, Salesforce, Rackspace, Dropbox, and many more.

Plug & Play Installation
Implementing SD-WAN is simple and easy. If it does not come built-in with your solution, you can opt to integrate SD-WAN capabilities in less than five minutes. Star2Star's SD-WAN works with any internet connection, supports up to 4 ISPs, and is designed to be transparent to any firewall and cloud application so you can maintain your provider, security, and compliance.
