

Get Back to Business with Business Continuity Management Services and Solutions

Clients expect financial institutions and financial services companies to be available throughout crisis situations, whether it's a pandemic, natural disaster, or cybersecurity breach. With flexible, scalable, secure online business continuity management (BCM), your organization can survive and thrive, as well as avoid compounding the initial issue with unforeseen costs and confusion.

Your team can use our interactive dashboard and tools to fortify business continuity resilience throughout your organization and in your third-party vendor relationships. Our software also includes protocols and enhanced features for managing pandemic situations.

With **Ncontinuity**, your team can:

Analyze impacts and results to safeguard your business

Our software provides the tools to create a business impact analysis (BIA) and analyze results so you can close the gap between recovery time objectives (RTO) and actual recovery times (RTA) and protect your organization from security breaches.

Plan and communicate easily

Built-in functionality allows you to construct, update, and test business continuity plans through a single data entry point, then notify identified personnel through multiple channels (voice, text, and email) for table top exercises as well as real-time incidents.

Customize and organize planning and actions for a variety of situations

Function-based planning gives you the ability to organize plans and action steps by key applications, infrastructure, or processes, streamlining business continuity plan implementation for multiple scenarios.

Measure results for assured compliance and powerful preparedness

Your organization needs documented results to ensure successful BCM planning and compliance. Our software generates measurable timeframes for quantifiable business continuity management results and assured exam success.

Key Features

- Pandemic-related content that can be configured to your needs, including prebuilt models and mapping tools
- Prebuilt and configurable business impact analysis and remediation strategies
- Comprehensive communication tools, including two-way communication for personnel status during an event
- Built-in post event or test analysis
- Extensive reporting and dashboards

Our solutions and services work together for seamless, scalable business continuity management.

You can hit the ground running with turnkey solutions that include proven pre-built models, or partner with our team of experts to customize your software implementation and provide onsite testing and support as you build confidence in the process.

Choose the services(s) that will meet your business continuity goals:

- Review and/or creation of Business Impact Analysis
- Implementation of communication tools to prevent adverse impact
- Documentation of all RTOs (Recovery Time Objectives) and RPOs (Recovery Point Objectives)
- Analysis of current continuity/recovery strategies to identify gaps
- Documentation of recovery processes and action steps
- Testing of business continuity efforts
- Quarterly reviews
- Maturity assessment and plans for enhancements

Get the peace of mind that comes with automated, integrated auditing.
