Secure and support distributed teams with remote access
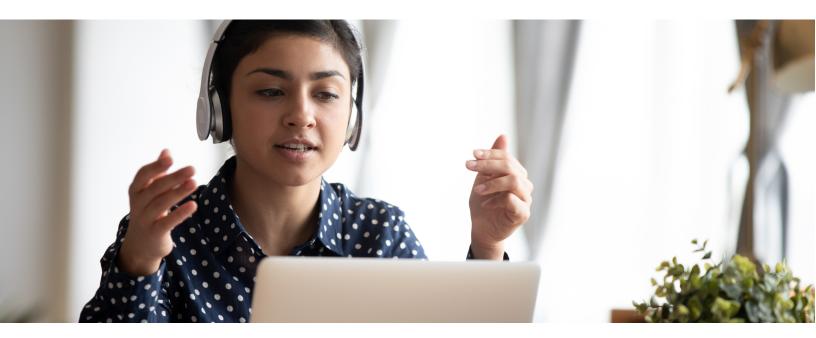

The nature of work is changing, with as many as seven in 10 white-collar employees contributing to their organizations from home or on the road.[1]

A growing remote workforce requires reliable access to corporate resources while minimizing the risks that come with connecting to the network. That's why Managed Security Service from Spectrum Enterprise, a complete managed service that is powered by Fortinet, provides secure connectivity for distributed teams — without any hardware to purchase or licenses to manage. It's also scalable, supporting up to 50,000 devices.

Advantages of remote access

- Securely access the network via encrypted VPNs (SSL and IPSec).
- Enjoy next-generation firewall protection for remote users' internet-bound traffic.
- Deploys fast with a simple software download.
- Includes the licenses as part of the Spectrum Enterprise Managed Security Service.
- Integrates with Spectrum Enterprise Fiber Internet Access or Spectrum Business Internet to secure information and support remote workers across all locations within the U.S.

Even if most of your employees are based in the office, travel and disruptions like weather emergencies can require them to occasionally access your network remotely. Enhance your business continuity with a solution that gives you peace of mind that your network will be secure no matter where work takes place.

Fully managed, fully secure

Realize the benefits of a single provider for connectivity and security. Offered with Fiber Internet Access or Spectrum Business Internet for reliable and scalable connectivity nationwide, Managed Security Service can provide the protection of unified threat management (UTM). We make it easier to protect your network by designing, configuring and managing internet security end to end. We handle all software updates and install the latest security patches, so you don't have to.

Managed Security Service
Protect your network with a fully managed solution that offers a firewall and UTM, intrusion detection and prevention, antivirus, event log management and easily deployed VPNs to secure remote connections.

Spectrum Business Internet
Support your internet needs with three speed choices, up to 1 Gbps download speeds, unlimited bandwidth usage and no speed throttling.

Fiber Internet Access
Experience high-performance, dedicated internet connectivity with symmetrical upload and download speeds and bandwidth up to 100 Gbps.

A trusted partner for the future of work

Wherever your employees work, you can count on a technology partner with 20-plus years of expertise supporting high-performance networks. Our connectivity services are backed by 99.99 percent availability service-level agreements, and all solutions come with 24/7/365 U.S.-based support. Spectrum Enterprise solutions, including advanced remote security features from Fortinet, can make your network simpler to maintain and more secure for your evolving workforce.
