Migration services

By 2021, spend on cloud services and cloud-enabling hardware, software and services is expected to double to over $530 billion, driven by digital transformation initiatives, according to industry analyst firm IDC.

Cloud everywhere for everything is increasingly becoming a distinct reality as businesses embrace the digital economy. We see more and more IT projects deployed in the cloud, unless there's a substantial reason not to do so.

Moving applications and workloads between IT environments isn't a common task for most IT staff. Without careful planning and consideration of all variables, a seemingly textbook migration can disrupt normal operations significantly.

At Flexential, our experienced cloud architects remove that risk with a methodical approach that is efficient, secure and relies on cloud governance best practices. We can project manage all aspects of your migration, inclusive of staff/resource coordination, technical resource dependency identification, order of operations and providing testing/go-live planning assistance.

With strong proficiency in mapping applications best suited to specific cloud environments and a focus on optimizing costs, our professional services team allows you to leap over unforeseen obstacles that could stymy even your best resources.

FLEXENTIAL

Avoid a poor migration outcome

When shifting applications to or between cloud platforms, many organizations opt for a do-it-yourself approach, which drains already-stretched resources. A project as complex as an enterprise cloud migration can benefit from the support of outside resources with informed perspectives and expertise across variables including regulatory compliance, internal integration and adoption barriers.

Ensure cloud readiness

Flexential helps organizations consider multiple factors central to moving applications into or between cloud environments. We use industry-leading tools to enhance services automation. You can rely on our cloud migration experts to employ best practices for governance, application design and performance, as well as security and interoperability with legacy IT infrastructure.

Long-term vision

The Flexential professional services team employs migration methodologies with a framework that creates lasting value for your organization inclusive of long-term guidance for future optimizations around cost, performance and resiliency.

Flexential helps organizations optimize IT transformation while simultaneously balancing cost, scalability, compliance and security. With a focus on building trusted relationships, providing valuable support and delivering tailored solutions and reliable performance, Flexential delivers colocation, connectivity, cloud, managed solutions and professional services to 4,200 customers across the U.S. and Canada.
