# Cisco SecureX threat response

## Security that works together

**A key component of the Cisco SecureX integrated platform, the Cisco SecureX threat response application helps security operations teams accelerate threat investigations and remediation.**

Cisco SecureX threat response aggregates and correlates threat intelligence sources and data from multiple security technologies - Cisco and third-party - into a single view. Now as part of SecureX, unify your security experience with a customizable dashboard of operational metrics, and automate threat hunting and investigation workflows.

You can simplify and accelerate critical security functions:

### Detection
Find and confirm the most important threats faster.

### Investigation
Easily determine where you're affected and how.

### Remediation
Respond immediately from threat response.

## Benefits

- **Out-of-box integrations.** Get more from your Cisco security investments when they are already working together.

- **Designed for your Security Operations Center (SOC).** Investigation and response capabilities combined into one convenient, efficient workbench.

- **Save time and effort.** Speed cyber investigations significantly and take corrective action immediately.

- **No additional cost.** Access to SecureX threat response is included with integrated Cisco security products. Start using it today - there's nothing to buy.

CISCO  The bridge to possible

## How to buy

To view buying options and speak with a Cisco sales representative,
visit www.cisco.com/c/en/us/buy.

## Cisco Secure integrations

SecureX threat response integrates with the following Cisco Security products so you can get more value from products that work together.

- Cisco Secure Endpoint
- Cisco Secure Malware Analytics
- Cisco Umbrella™
- Cisco Secure Email
- Cisco Secure Firewall
- Cisco Secure Web Appliance
- Cisco Secure Network Analytics
- Cisco Secure Cloud Analytics
- Cisco Defense Orchestrator

### Access intelligence anywhere

Our browser plug-in quickly pulls indicators of compromise (IOCs) and associated verdicts from any webpage or browser-based console, Cisco or otherwise.

### Automated enrichment

Add context from Cisco security products and threat intelligence sources automatically so that you know instantly which of your systems were targeted and how.

### Intuitive, interactive visualizations

See the results of your investigations on intuitive, relational graphs and timelines for better situational awareness and faster remediation.

### Incident tracking

Tracking incidents is easier than ever. Collect and triage key incident data, so you can manage and document your progress and findings and share them across your team.

### Third-party integrations

Leverage your full security stack and get out-of-box interoperability with a rapidly growing ecosystem of technology partners. Automate data enrichment and response actions across your security tools with built-in and pre-packaged integrations from Cisco and select technology partners. Custom integrations are also supported via APIs.

### Direct remediation

Stop pivoting between multiple security tools in order to stop attacks. Take corrective action directly from the Cisco SecureX threat response interface - block suspicious files, domains, IPs or URLs, and isolate hosts.

## Next steps

Learn more about Cisco SecureX threat response. It's easy to get started so you can begin your investigations today.
