

Avanan Cloud Security for Office 365

THREATS

PHISHING

Avanan uses machine-learning models trained for each organization on every user's history to identify 300+ indicators per message, catching what Microsoft's filter miss.

ZERO-DAY MALWARE & RANSOMWARE

Multiple real time malware, sandboxing, and A.I. active-content analysis tools work in parallel to identify malicious content in less time and with fewer false positives than any single product alone.

ACCOUNT TAKEOVER/INSIDER THREAT

Avanan analyzes every user event across multiple SaaS, comparing historical behavior, anomalous activity and profiles of real-world breaches to identify attacks in real time.

DATA SECURITY

DATA LEAK PROTECTION

Identify confidential data using industry- leading tools. Enforce regulatory compliance (PCI, HIPAA, SOX, etc.) across all your SaaS with cloud-aware, context-sensitive, policy work flows.

POLICY-BASED ENCRYPTION

Automate the encryption of sensitive files, whether shared internally or via email or public share without deploying new key infrastructure, using the protocols you already know and trust.

GOVERNANCE

CASB/SHADOW IT

Identify risky cloud services your employees are using in the office, at home or connecting to your approved SaaS accounts—without redirecting traffic or using a proxy.

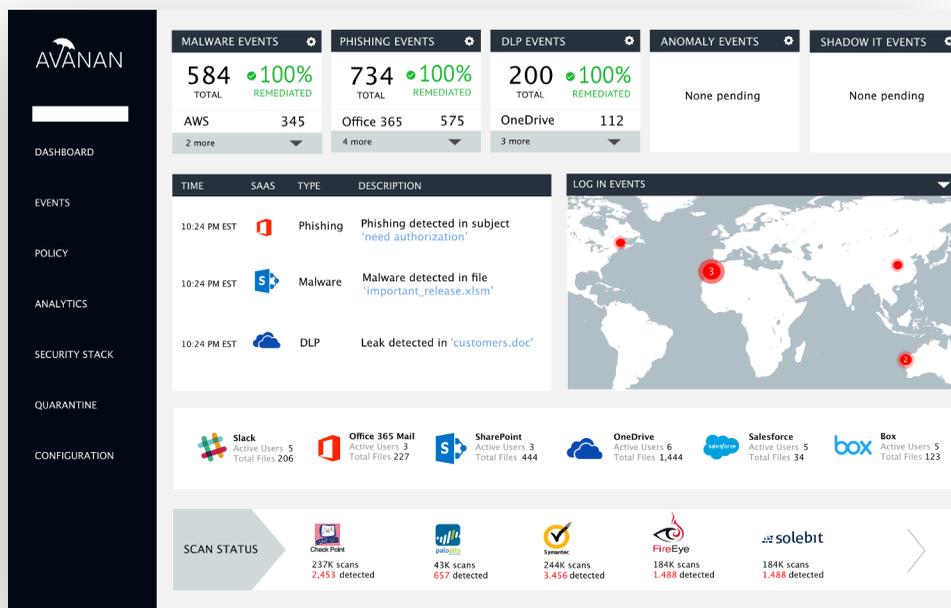

SIEM INTEGRATION

Avanan correlates user and file events from all your SaaS, combining them with real-time reports of the security stack so you can monitor the cloud with your existing SIEM.

"Issues are being remediated automatically by Avanan. Even when I'm getting notifications of breach attempts every day, I no longer have to panic."

—Jeff Madsen, CTO, Alex Alternative Experts

Avanan offers complete, defense-in-depth security for Office 365, whether you use email, OneDrive, Azure or the full collaboration environment.

Protect every email—inbound, outbound and internal. Prevent phishing and malware from propagating within your organization or spreading to your customers and partners.

Check every file for malicious content using the most advanced sandboxing and active-content analysis in the industry. Quarantine threats before they are downloaded by your users.

Identify confidential information and apply cloud-aware policies that keep it within a particular organization or work group. Your users can use the full power of Office 365 collaboration while automated work flows enforce regulatory compliance, ensuring PCI, HIPAA, PII or other protected content does not stray.

If you are making the transition from Microsoft's on-premise applications to the cloud, Avanan is the best way to ensure seamless security. **Deploy instantly with the true one-click, cloud-enabled platform: no need for a proxy, appliance or endpoint agent.**

Avanan Cloud Security Product Overview

"No other cloud security product can possibly compete on technology. All the top names are on their platform."

—Justin Jones, VP, ITPS

What is Avanan?

Avanan is a unique cloud security solution that provides complete protection of all of your SaaS applications, using multi-layer security from best-of-breed vendors. All from a single dashboard.

How does Avanan work?

Avanan cloudifies the security tools of the industry's leading vendors and connects these tools to the most widely used enterprise SaaS applications. With everything virtualized, implementing new security layers for your SaaS is now as easy as installing an app on a phone.

By simply choosing the security tools from the Avanan security app store, you can deploy multiple security solutions across any or all of your SaaS applications with a single click.

Benefits of Avanan

Connects via API

100% visibility, with no need to put a gateway or agent between your users and their apps. No latency, no disruption, no change in user experience.

Pre-configured

We take our partners' latest software and wrap the core technology in the Avanan API, standardizing all their user, file, event and policy information. We make cloud-native versions that are not available anywhere else.

Single License

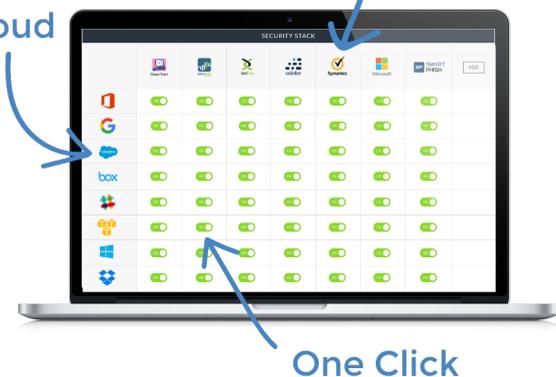

You don't need to pay for each security tool individually. Avanan consolidates each vendor's individual licensing model into a single per-user per month subscription.

Standardized Universal Policies

Every SaaS has a completely different policy engine, each with its own rules and enforcement capabilities. With Avanan you can create one policy and apply it everywhere without having to do the translation.

Any Security

Any Cloud

One Click

Complete Cloud Security

The Avanan Cloud Security Platform offers the industry's most complete cloud security solution with defense-in-depth capabilities to make your SaaS or IaaS both safe and compliant. Protects your users and files in most any cloud environment, from Office 365 to Gmail, Amazon to Azure.

Best Of Breed Technology

Avanan has partnered with over 60 vendors to provide the most advanced technology in every security category. We combine the tools from the largest and most trusted names like Check Point, FireEye and McAfee. We also seek out new, next-generation companies like Lastline and Solebit to stay ahead of the ever-evolving threats.

One-Click, Cloud-based Deployment

The Avanan Platform is based entirely in the cloud. Offering true Security-as-a-Service, we 'cloudify' pre-configured, zero-management versions of each vendor's core technology and made them available at the click of a button. The Avanan Platform connects directly to each SaaS/IaaS using native APIs—so there is no proxy or redirection of traffic—and because there is no software agent or appliance to install, it takes just minutes to deploy.

Secure your cloud for as low as \$2.50 per user.
