

Edge Data Centers

American Tower Edge Data Centers

To realize the full potential of wireless networks and advanced applications, enterprises and mobile network operators must improve data processing by extending network infrastructure closer to the edge, where the data is being generated and consumed.

Our Edge Data Center infrastructure is the foundation to enable an ultra-low-latency, 5G network, accessing interconnected network fabric and cloud resources to provide increased capacity.

Our professionally managed data centers are purposefully designed to include:

- Critical power (primary and secondary)
- Power distribution
- Monitoring and security
- HVAC
- Managed connectivity

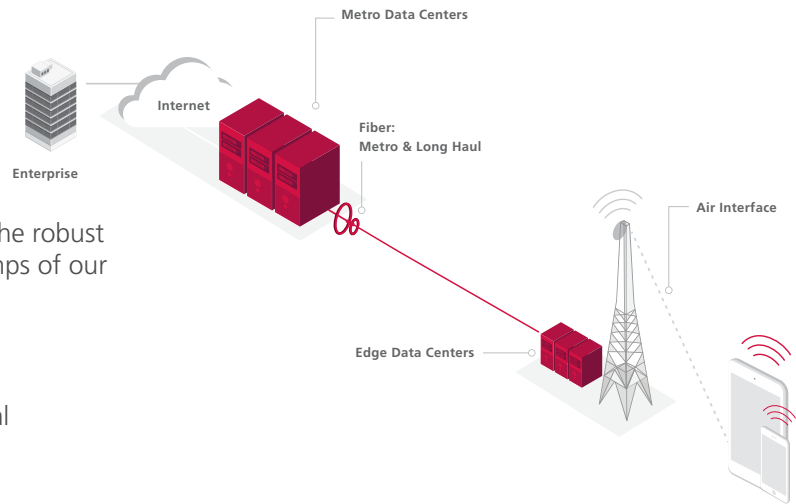

American Tower Edge Data Centers deliver:

- **Speed and scale** with ~43,000 tower locations for the deployment of Edge Data Centers
- **Strategic locations** where connectivity already occurs at the tower
- **Turnkey infrastructure** that is fully managed and provides access to upstream regional data centers
- **Reliability** 99.9% uptime, providing exceptional performance
- **Easy deployment** working with a single, trusted company for both tower and data collocation

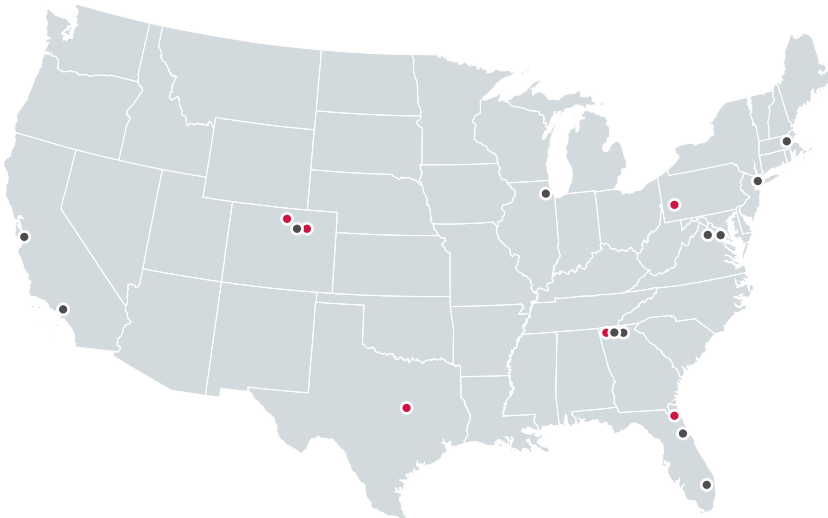

End-to-End Connectivity Solutions

- Our Edge Data Centers are supported by the robust interconnection offerings and cloud onramps of our metro and regional data centers
- Multiple infrastructure solutions to simplify deployment
- Tailored approach for each business vertical
- Flexible business models

American Tower currently has six Edge Data Centers and expects to expand to additional locations.
