

SERVICE BRIEF

MANAGED CLOUD INFRASTRUCTURE SERVICES

Unleash the Full Potential of Your IT Team

At a Glance...

Tactical needs often distract core IT teams from strategic goals.

With Managed Cloud, experts help relieve the burdens of routine cloud management and maintenance.

As a multi-cloud provider, we offer Managed NaviCloud®, which leverages VMware's hypervisor, and Navisite® Managed Azure®.

Navisite's deep experience and wide portfolio uniquely positions us to be your single, trusted IT partner.

Firefighting tactical issues often requires IT teams to repeatedly put aside more strategic projects, potentially causing timelines to slip. Viable revenue streams may even be discontinued solely due to lack of support.

The same IT teams are typically called on to decommission aging hardware and promote test/dev environments to production. All of this is alongside routine maintenance, which alone can require full-time, expert attention.

With a Managed Cloud solution, a trusted partner handles many of the critical, but time-consuming, tactical aspects of maintaining cloud infrastructure. This better allows your internal, core IT teams to focus on strategic initiatives and business innovation.

Hazards of Forecasting IT Demand

Variable priorities and markets can make predicting compute and storage requirements tricky—especially annual or multi-year needs. Underestimating capacity can lead to delays or downtime; overestimating can tie up IT dollars.

Selecting the Optimal Managed Cloud Solution

As an experienced, managed multi-cloud provider, Navisite's Managed Cloud solutions help organizations harness the scalability and flexibility of multiple cloud environments. By aligning your IT and business goals, we aim to be your single, trusted IT partner.

All of our Managed Cloud clients receive access to cloud servers, storage, networks, bandwidth and more, with 24/7/365 monitoring and management by Navisite's experts.

Managed NaviCloud - Leveraging VMware's powerful hypervisor, this platform provides a dependable cloud infrastructure provisioned into one of Navisite's US- or UK-based data centers.

Navisite Managed Azure - Provisioned into one of Microsoft's worldwide* data centers, Azure is designed for rapid scaling of cloud native apps and integrates closely with other Microsoft enterprise solutions.

Transform Core IT into an Innovation Engine

Client Spotlight

"Navisite handles everything at the back of the house that our team doesn't want to worry about. They deliver the security and comfort we need to be able to focus on projects that are critical to business growth."

- Patrick O'Sullivan, Head of IT

A Closer Look at Navisite Managed NaviCloud

Over the past fifteen years, Navisite's in-house experts have evolved and optimized our Managed NaviCloud platform. NaviCloud is designed to offer the complete functionality of VMware's powerful hypervisor via Navisite's streamlined Proximity client portal, which supports maximum compatibility with our array of enterprise-grade managed services.

Considering NaviCloud is provisioned into one of Navisite's own dependable data centers, we can also provide Managed Hosting of physical servers from the same facility in which your NaviCloud resources are located. This configuration can help enable low-latency solutions for even complex workflows.

Navisite Managed Azure: a Time-proven Relationship

While Azure offers nearly unparalleled access to cloud resources across the world*, getting started with this powerful platform can sometimes prove daunting. For more than twenty years, Navisite has been working with Microsoft to provide expert management for a variety of enterprise solutions. With an ever-growing number of Microsoft certified experts, we can help you fully realize the benefits you envisioned when first planning a move to Azure. Remain in control of your cloud environment, and enjoy continuous visibility into usage, performance, etc., while Navisite helps eliminate laborious, tactical burdens.

Flexible Delivery Models: Managed, Self-Service AND Hybrid

You don't have to choose from 100 percent Managed or Self-Service Cloud. For example, clients often use Self-Service Cloud for test/dev, and then transition workloads to Managed Cloud when they're ready for production. Blending Managed with Self-Service Cloud can work to help you meet even complex IT requirements.

Similarly, while transitioning all workloads to the cloud is a common goal, in the near-term a hybrid approach is often practical. For example, an organization may opt to keep a difficult-to-transition workload in its legacy data center, while migrating all other workloads.

Unlocking the Benefits of a Fully On-net Solution

Combining Spectrum Enterprise Ethernet and Navisite Services can help enable solutions that can be fully managed from the network connectivity level to the operating system—all backed by robust Service Level Agreements. Companies that combine Spectrum Enterprise Ethernet and Navisite Services can reach expert support for their solution 24x7. Clients also benefit from the security and privacy that comes with a fully on-net, single-provider solution.

About Navisite

Navisite, Inc., a part of Spectrum Enterprise, is a leading international provider of enterprise-class, cloud-enabled hosting, managed applications and services. Navisite provides a full suite of reliable and scalable managed services, including Application, Cloud Desktop, Cloud Infrastructure and Hosting services for organizations looking to outsource IT infrastructures to help lower their capital and operational costs. Enterprise customers depend on Navisite for customized solutions, delivered through an international footprint of state-of-the-art data centers.
