

DATABLEND SAMPLE USE CASES FOR ADP® API CENTRAL CLIENTS

DataBlend can support essentially any integration and associated workflow needed to connect ADP Workforce Now® and ADP Workforce Now® Next Generation to other applications, some from our existing API connections and others from custom, tailored solutions you request.

A list of our existing API connections can be found on our knowledgebase:

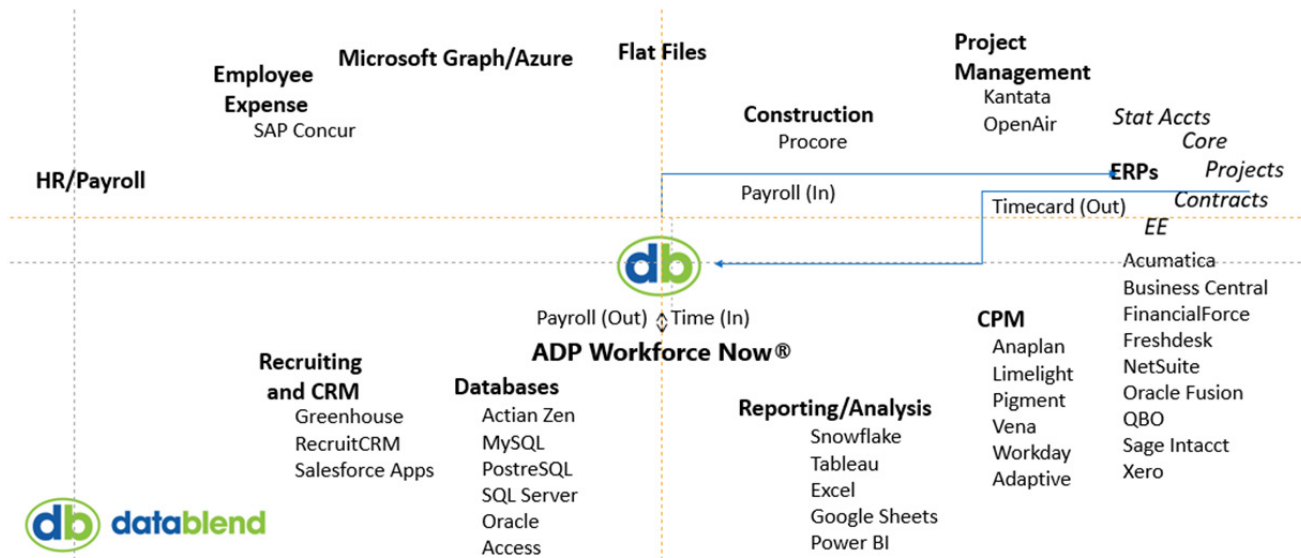

[Source Connections/Collectors](#)

[Target Connections](#)

Below are examples of automated integrations we can implement for your business. Other use cases can be supported, so please let us know your requirements and we will be in touch!

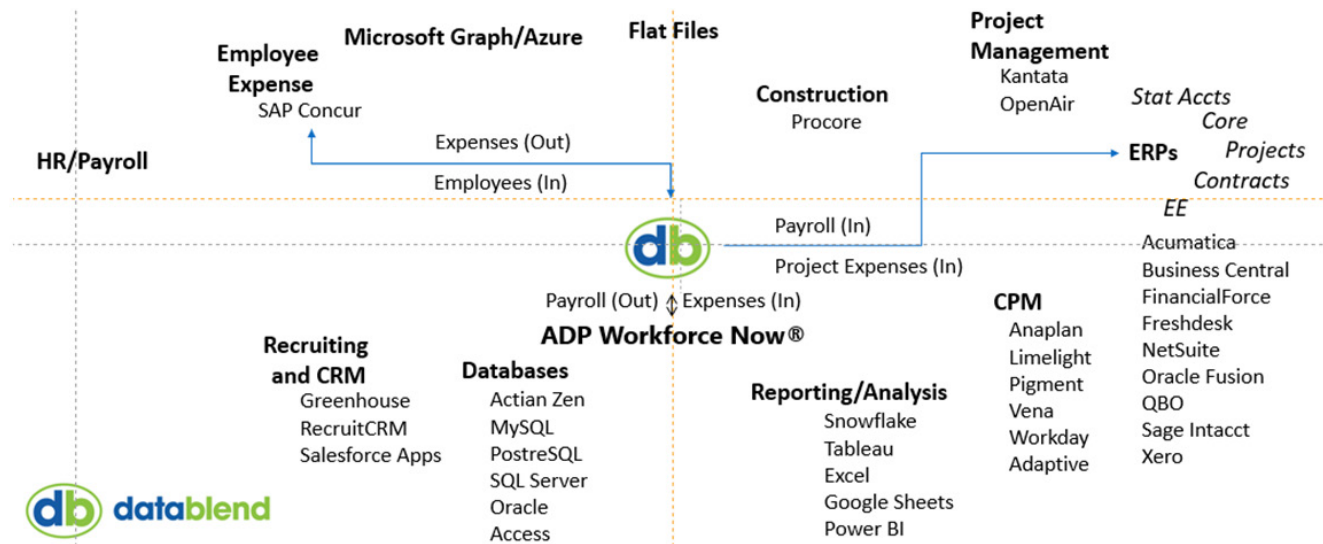

ADP → ERP for posting Journal Entries (JEs)

ADP → ERP for updating employee roster

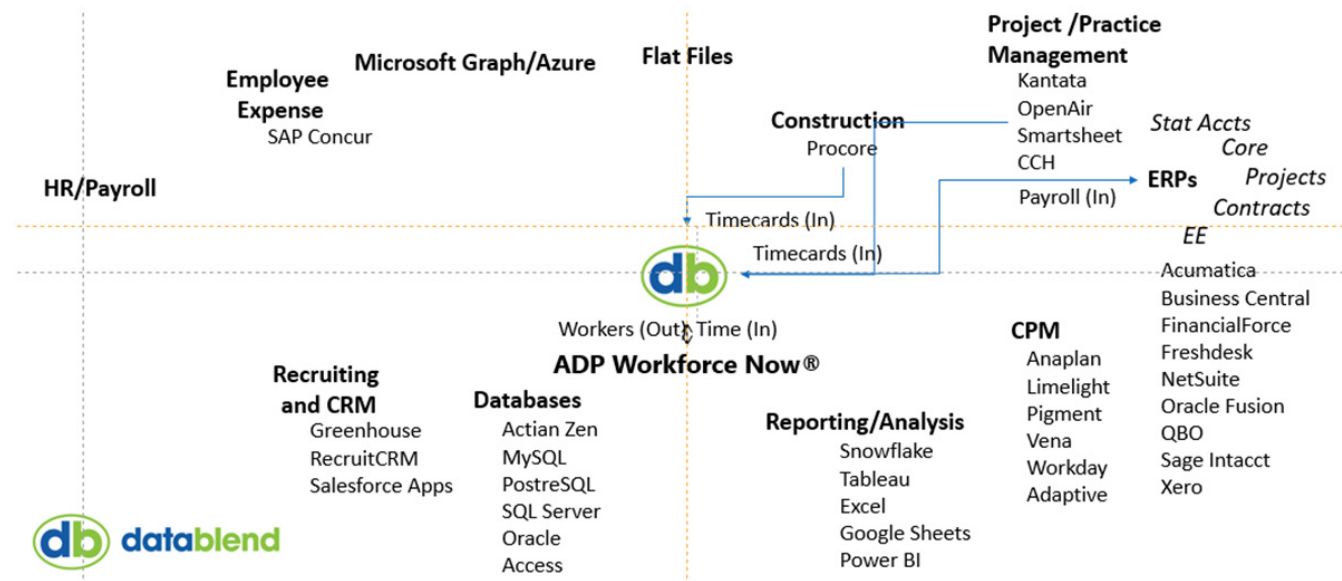

Employee Expense Management (EEM) → ADP to load employee expenses from EEM file

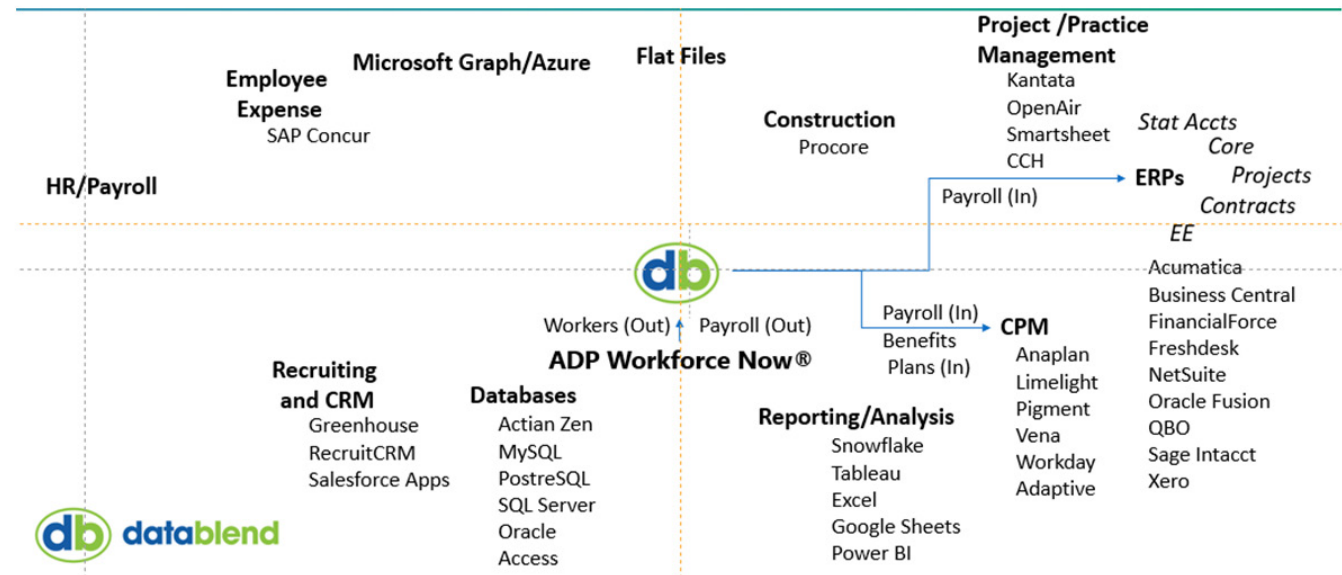

ADP → EEM to create a file to update EEM application with payment info

Timesheets → ADP to generate payroll for hourly employees

ADP → CPM to update forecast with actual payroll data

ADP ↔ flat file

ADP → reporting tools like Snowflake, Tableau, Excel, and Google Sheets
