

CompXL ADP Integration

CompXL features a data load integration with ADP Workforce Now® pulling employee worker compensation data.

Seamless and secure integration with ADP Workforce Now allows single sign on from ADP® and automatic data feeds. Information such as worker data, core data, and corporate directory data automatically flow into CompXL.

The integration enables users to authenticate into CompXL using single sign-on (SSO) from ADP Marketplace or from a quick link in ADP Workforce Now.

CompXL reads the following data fields:

1. Basic worker demographic information including name, hire date, work status, job title, manager/reports to hierarchy.
2. Base or primary pay (i.e. salary, wage) associated to a work assignment.
3. All other forms of compensation beyond the base pay associated to a given work assignment.
4. Pay range of the pay grade.
5. Custom fields as needed to support the planning process.
