

Connect ProjectSight and Procore Projects

Data you need in the system you prefer.

Reclaim valuable time with the powerful cross-platform connection between Trimble® ProjectSight™ solution and Procore, powered by Trimble App Xchange. Ensure your team can stay in ProjectSight and maintain your audit trails, even when a project requires data entry in Procore.

Eliminate data silos and keep projects on track

Get the information and answers you need from project stakeholders faster, so you can keep building and reduce errors.

Reduce busy work

Minimize the burden of manual data entry between software, simplify administrative tasks and get control over the information you need.

Complete project data

Maintain your audit trail within ProjectSight with statuses, comments and files from Procore. Now your organization has the information they need during and after the project.

Save time on administrative work

7 hours a week

Managing RFIs and Submittals in Other Systems

\$15,000

Annual Savings in Administrative Costs

PROCORE

ProjectSight®

Powerful Synchronization

Project teams stay in sync with a bi-directional data flow supporting RFIs, submittals, drawings and files.

RFIs

Create RFIs in ProjectSight with attached files or links and sync them to Procore. The integration will only sync RFIs based on your configuration of statuses and assignments. The RFI will appear in Procore with the information from ProjectSight. Any responses or attachments will sync back to the same ProjectSight RFI.

Drawings

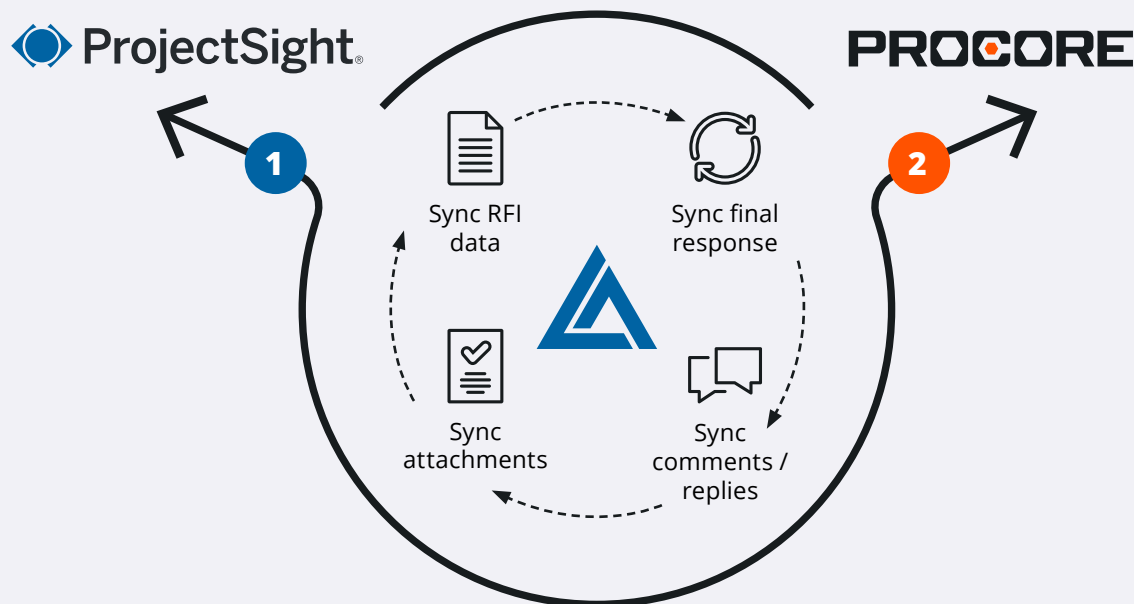

Published Procore drawings will sync to ProjectSight, including the title, drawing number, revision number and discipline. Review the drawings and publish them within ProjectSight to maintain control.

Submittals

Create your submittals in ProjectSight, and sync them when ready by updating the status. The Submittal with its attachments will be created in Procore, any following submittal approver responses from Procore will sync back to ProjectSight.

Files

Project documents from Procore will sync to the ProjectSight file library, respecting the same folder hierarchy in Procore.
