

Spectrum Integration with Workyard

Learn how to integrate Spectrum with Workyard to sync jobs, employees, cost codes, and export time cards for payroll and job costing.

 Written by Yesenia Quintana
Updated over 5 months ago

We're so excited you're considering integrating your Workyard account with Viewpoint Spectrum by Trimble! This integration helps streamline your job costing and payroll workflows by syncing important data between platforms.

Note: You will need to have an active **Workyard Enterprise Subscription** to use this integration.

What information can be imported from Spectrum?

Once your integration is enabled, Workyard can automatically import the following data from Spectrum:

Workyard Field	Spectrum Field
Project	Job
Cost Code	Phase
Worker (W-2)	Employee
Worker (1099)	Vendor

What time card data can be exported to Spectrum?

Workyard supports exporting time card data to Spectrum as Pre-Time Card Batches, including:

Workyard Field	Spectrum Field
Regular Hours	Regular Hours
Overtime Hours	Overtime Hours
Double Time Hours	Double Time Hours
Project	Job
Cost Code	Phase

Important: Projects and cost codes must be tagged on the time card in Workyard for them to map correctly in Spectrum. If no tags are applied, they won't be included in the export.

How to set up the integration

Setting up your Spectrum integration is simple, but must be done in coordination with the Workyard team to ensure everything is configured properly.

Step-by-step setup:

- Contact Support**
Reach out to us via in-app chat or email support@workyard.com to request the Spectrum integration.
- Confirm Spectrum Configuration**
Workyard will guide you through verifying your Spectrum setup (including API access and credentials).
- Enable Integration**
Once Spectrum is ready, the Workyard team will enable the integration on your account.

Optional Features

- Include Notes in Export**
You can optionally include time card notes in your export to Spectrum. This can be enabled as part of your integration setup — just let us know!

More help coming soon

We're currently developing additional support articles to help you troubleshoot, customize, and get the most out of your Spectrum integration. Stay tuned!
